

# EV Counteract<sup>®</sup> LUBE

3.6 kg / 8 lbs

## TIRE LUBE

Specially formulated  
for high torque  
electric vehicle  
applications

**Protects  
against rust**

**Synthetic based,  
non-petroleum**

**Provides extreme tack  
and adhesion minimizing  
tire and rim slippage**

- Helps extend tire life on electric vehicles
- Quick mounting and demounting
- Protects tire bead and rim from damage during tire mounting

Part #	Product Description	Case Quantity
CBB-EV8	Electric Vehicle Tire Lube - 8lbs (3.6 kg)	4

### Instructions

1. Thoroughly clean the surface of the wheel, rim and tire bead.
2. With a brush, apply the EV lubricant to the tire bead and the wheel/rim flange where the tire seats.
3. Inflate the tire and allow the tire bead to seat properly.
4. Reinstall the valve core and inflate the tire to the proper PSI stated by the vehicle manufacturer.
